GRAIN CONFERENCE

CEREALS, OILSEEDS, PULSES:

2019/2020 season results and 2020/2021 season perspectives

Nur-Sultan, September 28, 2020

CEREALS, OILSEEDS, PULSES: 2019/2020 season results and 2020/2021 season perspectives

MODERATOR

**Mr. Nurlan
OSPANOV**

Chairman of the
Kazakh Grain Union

Cereals. 2019/2020 season results and 2020/2021 season perspectives. Problematic issues.

Mr. Alexander Malov, Director General of the VKZ-Agro LLP

Oilseeds. 2019/2020 season results and 2020/2021 season perspectives. Problematic issues.

Mr. Eugeniy Karabanov, Founder of the Northern Grain group of companies

Pulses. 2019/2020 season results and 2020/2021 season perspectives. Problematic issues.

Mr. Kintal Islamov, Chairman of the Board of the Atameken-Agro JSC

2020 harvest quality of cereals and pulses. Problematic issues.

Mrs. Gulmira Abisheva, Director General of the Baltic Control Kazakhstan LLP

Export quality requirements for oilseeds and products of their processing.

Mr. Zhandos Esmagul, Business development manager of the SGS Kazakhstan Ltd

CEREALS, OILSEEDS, PULSES: 2019/2020 season results and 2020/2021 season perspectives

SPEAKER

**Mr. Alexander
MALOV**
Director General
of the VKZ-Agro LLP

CEREALS. 2019/2020 season results and 2020/2021 season perspectives. Problematic issues.

Soft wheat supply and demand balance in 2018-2021

- During the current season we see the low volumes of feed wheat, therefore we expect the raise of domestic consumption of barley due to feed purposes

Russia	36	40 	30 
Other countries	5	50	50
TOTAL	1726	1400	950

2020-2021 season perspectives for wheat

- In the current season Kazakhstan will still be present on its sales markets - Uzbekistan, Tajikistan, Afghanistan;
- The unusually high quality of the harvest in 2020 will allow Kazakh exporters to guarantee the supply of grain with high quality indicators;
- There will be high competition on the traditional sales markets, which will not allow the domestic price to continue its rapid growth ;
- The Siberian-Altai zone will have a slightly less impact on pricing in Kazakhstan, which was typical for the last year - due to a decrease in production and a high purchase price in the Russian Federation, as well as the introduction of JSC “NC “KTZH” additional costs for transporting imported grain from Russia through Kazakhstan to Central Asia;
- We will monitor the prices of the Russian wheat recalculated to the Central Asian market, taking into account direct transit through Kazakhstan. The export price of Kazakh wheat will depend on this;
- We expect that the price for food wheat of 3rd grade will be at the level of 85-95 thousand tenge, VAT included.

2020-2021 season perspectives for barley

- This season, the main buyer of Kazakh barley, Iran, has great difficulties in financing the purchase and import of barley, in this connection we expect a significant decrease in demand for our forage from this importer. We expect that in October-November Iran will enter the purchase, but the total volume will be much less than previous years;
- A new player appears - China. We talked about this at the **KazakhGrainExport 2019** conference, which took place on September 19-20, 2019 in the city of Istanbul. We see an active presence of Chinese buyers, which will have a positive effect on the Kazakh grain market. In 2-3 years we forecast exports to China of up to 1 million tons of barley;
- We expect that the price of feed barley will be in the range from 52 to 57 thousand tenge including VAT.

Problematic issues

- One of the acute problems at the moment is the policy of JSC "NC "KTZh" towards increasing the cost of the tariff for the transportation of imported Russian grain from Kazakhstan to Central Asia, which only contributes to the development of illegal imports from Russia. Gray dealers, forging certificates of origin, are becoming more competitive than official importers, who, paying all taxes on the import of Russian grain, will be obliged to pay an expensive transit tariff ;
- We expect difficulties with VAT refunds after tax audits due to the general economic situation in the country;
- There is still a problematic issue - illegal imports from Russia. In this connection, we assume that most amount of 700 thousand tons of imports will be imported illegally;
- This season we see serious financial difficulties in Iran;
- Due to the low throughput capacity of the Kazakhstan / China border crossings, we predict difficulties with the export of wheat and barley, which may not allow achieving high indicators in this direction;
- The innovation of the Exchange Committee in the form of compulsory registration on the exchange of 5-15% of grain turnover, in our opinion, will be an additional tax on small farms, and the obligation of Kazakh grain importers to conclude agreements with brokerage companies to participate in the double counter anonymous auction will further complicate the situation on the export market Kazakhstan;
- The volatility of the Kazakh tenge and the Russian ruble this season will also affect the pricing on both domestic and export market, so we closely monitor the exchange rates.

MAIN NONCONFORMITIES BY QUALITY INDICATORS

SOFT WHEAT/ DURUM WHEAT	BARLEY	PULSES
LOW FALLING NUMBER	FOREIGN MATTER	SIZE NONCONFORMITIES
UNNATURAL SMELL: ABSINTHIAL MALTY	UNNATURAL SMELL: ABSINTHIAL MALTY	MIXTURE OF TYPES LACK OF MARKETABLE STATE
SPROUTED KERNELS	SPROUTED KERNELS	
QUARANTINE OBJECTS: SMARTWEED	QUARANTINE OBJECTS: SMARTWEED	
FUSARIUM		

QUALITY DEFINING FACTORS

CLIMATE CONDITIONS	STORAGE CONDITIONS
<p>WEATHER DURING HARVESTING MAKES HIS CORRECTIVES.</p> <p>Heavy rainfall in the second decade of September led to a deterioration in quality indicators:</p> <ul style="list-style-type: none">1. Increase of humidity2. Increase of the number of sprouted kernels, and as a consequence:<ul style="list-style-type: none">- increase of falling number;- increase of grain admixture;- reduction of test weight of barley. <p>There's also a danger of grain to get under the autumn frosts, and as a result the number of frost kernels will increase:</p> <ul style="list-style-type: none">- an unusual smell will appear;- the quality of gluten will deteriorate (crumbling, low FDM). <p>THE ABOVE QUALITY INDICATORS, IN THE CASE OF DECREASING, WILL REDUCE THE DEMAND FOR EXPORT IN THE DIRECTION OF TRADITIONAL SALES MARKETS.</p>	<p>It is necessary to comply with the conditions for storing grain at elevators in order to ensure the quantitative and qualitative preservation of grain, as well as timely implementation of measures provided by the technological processes: CONDITIONING , DRYING, VENTILATION.</p>

CEREALS, OILSEEDS, PULSES: 2019/2020 season results and 2020/2021 season perspectives

SPEAKER

**Mr. Zhandos
ESMAGUL**

Business
development
manager of the
SGS Kazakhstan Ltd

**Export quality requirements for oilseeds and
products of their processing.**

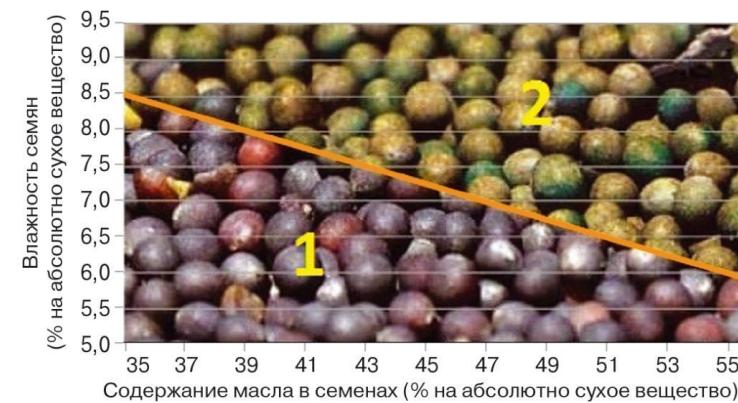

SEED QUALITY - PRODUCT QUALITY - GROWING CONDITIONS

Oilseeds are sensitive to:

- Soil moisture content
- Solar radiation intensity
- Temperature

It has been established that, depending on the climate and changes of weather conditions, the fat content in the seeds of oil plants can vary by 10-15%.

1 – качественные семена рапса, 2 – некачественные семена рапса (бурая или серая окраска).

FLAX SEEDS IN KAZAKHSTAN

- Oil content on average 42.8%
- Growing zones: Akmola, Kostanay and North-Kazakhstan regions
- Export to EU countries (Belgium), as well as to Belarus, Poland, Afghanistan and Turkey
- Quality indicators of the 2020 harvest:
 - oil content is in the range of ≈ 42.8% on dry weight
 - amount of free fatty acids (FFA) is not more than 0.8%
 - Acid value does not exceed the permissible limit of 2.0 mg KOH

SPRING RAPE SEEDS IN KAZAKHSTAN

- Oil content up to 50%, and protein up to 18-23% per dry weight of seeds, while the protein is well balanced in amino acid composition
- Growing zones: North Kazakhstan, Akmola, Kostanay and Pavlodar regions
- Export to Iran, Belgium, Mongolia and other countries, export of rapeseed to China and Italy is planned
- The seeds contain toxic compounds: erucic acid and glucosinolates
- Quality indicators of the 2020 harvest:
 - oil content is within 40 ÷ 45% (dry weight)
 - amount of erucic acid is not more than 1% with a limit of 2.0%
 - glucosinolates do not exceed 15 µmol / g (with a limit of 25 µmol / g).
 - amount of free fatty acids (FFA) within 0.2-0.6% did not exceed the permissible limit (2.0%)

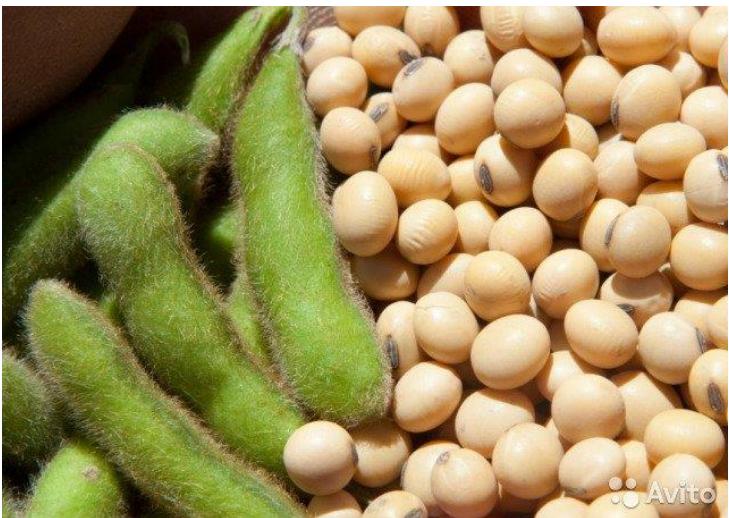

SUNFLOWER SEEDS IN KAZAKHSTAN

- Oil content 45-50% on dry weight, and protein up to 21% on dry weight of seeds
- Growing zones: East Kazakhstan region (~ 60% of the volume of oil seeds produced), as well as Pavlodar and Almaty regions
- Export to China, Iran and Uzbekistan
- Quality indicators of the 2020 harvest:

- oil content within 40 ÷ 50% (dry weight)
- number of broken - 1.5%
- number of overheated - 1.7%
- number of eaten - 1.8%
- amount of aflamycotoxins does not exceed the allowed limit

SOYBEANS IN KAZAKHSTAN

- Oil content up to 27%, and protein 30-52% on dry weight of seeds
- Growing areas: Almaty region (98% of all soybeans), there are successful attempts to produce soybeans in the north
- Export: Sweden, Uzbekistan, Tajikistan, Kyrgyzstan

OILSEED CAKES AND MEAL

- Oilcakes are twice or more superior to bran in the content of nitrogenous compounds, and are also rich in oils (up to 10%)
- Rapeseed cakes and meal are close in quality to soybean cakes and contain up to 40% of protein.
- Flaxseed cakes contain up to 35% of protein and about 32% of nitrogen-free extractives
- Export to China and Iran

The main physical and chemical parameters of the cake of some oilseeds

Type	Humidity, %	Nitrogenous substances, %	Nitrogen-free extractives, %	Cellulose, %	Ash, %	Fat (oil content), %
Flaxseed cake	12,0	28,0	30,0	11,0	8,0	11,0
Sunflower cake	9,3	35,3	23,5	10,6	7,9	13,4
Rapeseed cake	11,5	31,6	29,3	11,0	7,0	9,6

VEGETABLE OILS OF KAZAKHSTAN

- High quality requirements:
 - organoleptic
 - physicochemical indicators: iodine number, acid number, peroxide number, saponification number and unsaponifiable residue, mass fraction of non-fatty impurities, mass fractions of sediment and phosphorus-containing substances, moisture and volatile substances, etc.
 - fatty acid composition, etc.
- Primary cold pressed vegetable oils, are then further processed
- Export to European countries, besides China and Iran.

STRICT CONTROL OF SAFETY INDICATORS OF OILSEEDS AND PRODUCTS OF THEIR PROCESSING

- Concentration of heavy metals (lead, arsenic, cadmium, mercury)
- Number of residual pesticides, etc.
- Mycotoxin content (aflatoxins, ochratoxin, deoxynivalenone, zearalenone).

Permissible limits of contaminants in crude sunflower oil (ISIRI №10086)

No	Pollutant type	Maximum
1	Lead, ppm	0,1
2	Arsenic, ppm	0,1
3	Hexane residues, ppm	290
4	Polycyclic aromatic hydrocarbons, ppm	2
5	Mineral oils	Not found
